AMETEK LAND HAS BEEN MANUFACTURING PRECISION MEASURING EQUIPMENT SINCE 1947.

WE ARE SPECIALISTS IN NON-CONTACT TEMPERATURE MEASUREMENT AND COMBUSTION MONITORING WITH APPLICATIONS ACROSS DIVERSE INDUSTRIES SUCH AS STEEL AND GLASS MAKING, POWER GENERATION AND CEMENT MANUFACTURE.

As part of AMETEK Process & Analytical Instruments Division since 2006, our customers benefit from the worldwide AMETEK sales and service team.

System 4 comprises an advanced range of high precision radiation thermometers, LANDMARK® processors and a range of mounting accessories which combine to form a complete temperature measurement system.

System 4 thermometers offer exceptional flexibility with a choice of single wavelength, ratio, fibroptic and fibroptic ratio models.

Thermometer type, temperature range, spectral response and optical characteristics are chosen to suit any application from 0 to 2600°C/50 to 4700°F

- Focusable optics - standard and short focus versions with through-the-lens sighting providing clear and guaranteed definition of target
- Optional close-up lenses - giving measurement of targets as small as 0.45mm/0.02in
- Accurate, reliable, drift-free measurement
- Rugged design with a range of mounting options
- Flexible fiber optics light guide versions - with optional laser targeting system to define target spot
- High level linear output

RADIATION THERMOMETERS

Proven, reliable electronics and a high quality optical system combine to deliver accurate, dependable temperature measurement. A rugged die-cast aluminium body, with a high quality electrical connector, ensures reliable performance.

Standard bodied thermometers all feature through-the-lens sighting with a 6° field of view. Adjustable focus with a circular graticule gives precise alignment on to the smallest targets. Two optical variants are available: Standard focus - adjustable between 500mm/19.7in and infinity, and Short-focus - viewing from 350mm to 1m/13.8 to 39.4in. Close-up lenses are also available which can measure targets as small as 0.45mm/0.02in from as close as 90mm/3.5in.

FIBROPTIC THERMOMETERS

The use of flexible fiber optics allows the detector and electronics enclosure to be located in a less hostile environment, and enables access to difficult targets. The fibroptic thermometers are available with an optional integral laser targeting system which defines the target spot for accurate alignment.

The use of fiber optics permits viewing of normally inaccessible targets, where there are high magnetic fields or in high ambient temperatures up to 200°C/400°F without cooling of the optic head. There is a choice of three optic heads and three light guide lengths.
